

# **Reporte Mantenimiento 2020**

## **South Course**

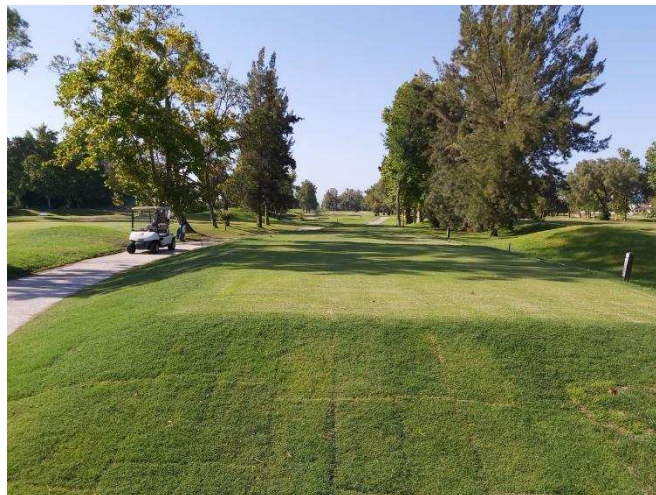

### **Tee 6 South**

The tee has been enlarged to facilitate its recovery and prevent the shadow of the trees from affecting the state of the tee, it has also been used to increase the flat surface of the tee.

### **Tee 8 South**

We have flattened the tee of the 8 and we have taken the opportunity to enlarge it and thus improve its recovery.

### **Hole 17th South**

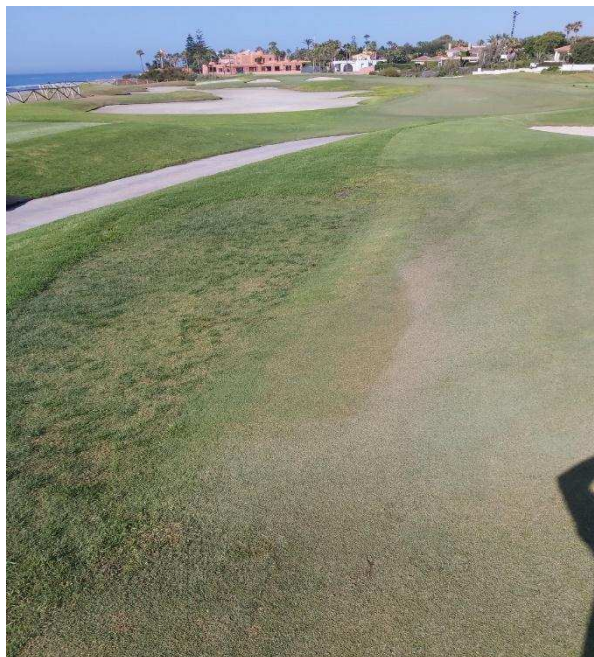

The trees of the entire area on the right have been cut down in the sense of play since the trees did not show a healthy appearance and a week ago the trees were cut down.

We have also started planting new trees.

### **Hole 10 South**

The small bunker behind the 10 green has been removed, as it did not make great sense and involved high maintenance.

### **North Course**

#### **Hole 2nd and 3 North**

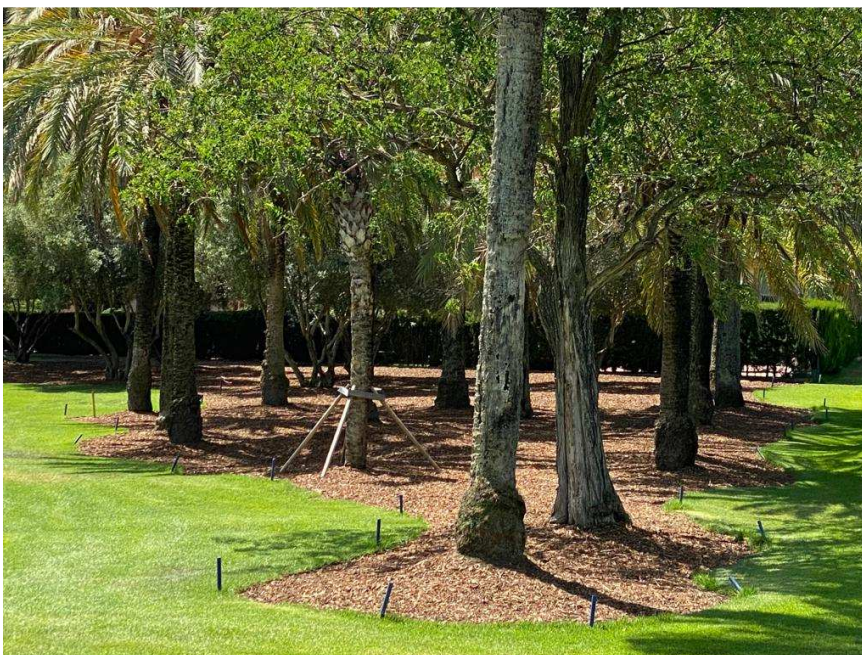

Hole 2 North

The landscaping has started implementing with “MULCH”, a trial has been carried out on hole 2 of the north course and if it works we will proceed to do it in the South.

This landscaping process will provide us with a more detail-focused field and lower maintenance hours costs in the grove areas.

If you have acceptance from both the partner and the maintenance team, we will proceed to an implementation plan in the South Course.

### **Hole 11 North**

We have flattened the tee of the 11th hole and put a bermuda tee, which improves the playing conditions.

### **Hole 17 North**

We have flattened the tee of the 11th hole and put a bermuda tee, which improves the playing conditions

Future points in the agenda

- South Course 100% bermuda.
- Replacement of the kiosks of both courses
- One marshall per course.
